Introduction to Pentaho BA Suite Wizard Installation

The Wizard is the easiest and quickest way to install the Pentaho Business Analytics (BA) Suite.

**NOTE:**
We recommend using this installation method for evaluation purposes only.

The BA Suite consists of BA and Data Integration (DI) components. After installation, you can use the software to create reports and visualize data, create and schedule data integration processes, model data, and perform other processing on traditional and big data sources.

**Prerequisites**
If you are not sure which installation method to use, read [BA Installation Overview](#) before you begin.

**Expertise**
These instructions are written for anyone who wants to install the Pentaho BA Suite, or individual BA and DI components.

**Tools**
You must supply a server or workstation that meets the hardware and operating system requirements indicated in [support technologies](#).

**Login Credentials**
All of the tasks in these instructions require that you have the computer privileges or accesses you need to install software on your server or workstation.
