Evaluating Pentaho

Evaluate and Learn Pentaho Business Analytics
Pentaho Business Analytics combines business analytics with data integration allowing business users to make information-driven decisions, data scientists to create robust data models, and IT administrators to deliver a secure, scalable platform for a broad set of users.

Evaluate and learn

Evaluate and Learn Pentaho Data Integration (PDI)
Pentaho Data Integration is a robust extract, transform, and load (ETL) tool that you can use to integrate, manipulate, and visualize your data. Use PDI to import, transform, and export data from multiple data sources, including flat files, relational databases, Hadoop, NoSQL databases, and more.
